

Oil Drum Drain Basin

Oil drum drain basin with removable filter designed to hold bottles and filters upright, to allow waste oil to drain completely for contamination free oil disposal. Features ribbed draining channels, four bottle holes and a wide draining platform so that multiple bottles and filters can be drained at the same time. The basin has a diameter of 350mm, sized to fit 20-30 litre drums and is manufactured from oil and chemical resistant high-density polythene. A convenient hands-free solution for efficient waste oil disposal.

Additional Information

- Designed for use with 20L/30L open topped waste oil receiving drums.
- Capacity 3L & 350mm diameter x 127mm high.
- Features ribbed draining channels and a filter gate to prevent oil contamination.
- Manufactured from chemical resistant high density polythene.
- Larger oil drain pan also available. Please see part no. 5628.
